

Installing the VIVO virtual machine on your Mac

- Need `sudo` privilege
- Execute the following commands in a Terminal window

Step 1: install Homebrew

- Paste this into a Terminal window, one line, quotes and all
 - `/usr/bin/ruby -e "$(curl -fsSL https://raw.githubusercontent.com/Homebrew/install/master/install)"`

Step 2: install Vagrant

- Execute these commands in a Terminal window:
 - `brew cask install virtualbox`
 - `brew cask install vagrant`
 - `brew cask install vagrant-manager`

Step 3: install and run the VIVO virtual machine

- `cd` to an appropriate directory to contain the virtual machine
- `git clone -b gui-developer-v1.9.3 https://github.com/vivo-community/vivo-vagrant`
`vivo-vagrant`
- `cd vivo-vagrant`
- `vagrant up`
